DETAILED ACTION

Response to Amendment

In view of the amendment, filed on 07/28/2008, following rejections are withdrawn from the previous office action, mailed on 03/26/2008, for the reason of record.

- Rejection of claims 1-9 under 35 U.S.C. 112, second paragraph
- Rejection of claims 1-2, 4, and 7 under 35 U.S.C. 102(a) as being anticipated by Waldschmitt et al (US 2003/0052249)
- Rejection of claims 3, 6, and 8-9 under 35 U.S.C. 103(a) as being unpatentable over Waldschmitt et al ('249) in view of Schworer (US 5,000,287)
- Rejection of claim 5 under 35 U.S.C. 103(a) as being unpatentable over Waldschmitt et al. ('249) in view of Blaive et al. (EP 0155217)

Response to Arguments

Applicant's arguments, filed on 07/28/2008, with respect to the rejection of claims 1 and 10 have been fully considered and are persuasive. Therefore, rejection of claims 1-2, 7, 10-12 has been withdrawn.

Allowable Subject Matter

Claims 1-2, 7, 10-12 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior arts of record fail to teach or suggest a climbing system for shuttering, scaffolding, and loads comprising an upright adapted to be fixed to a wall or to move vertically in relation to the wall, a bracket arrangement adapted to be fixed to the wall or to move vertically in relation to the wall with a movement relative to the upright, a shuttering structure mounted on a bracket arrangement for casting sections of the wall, a hydraulic cylinder including a rod, an upper head attached to the bracket arrangement and also solidly joined to the body portion of the hydraulic cylinder, and a lower head attached to the rod of the hydraulic cylinder in which each of the upper and lower heads further comprises a body with upper and lower wings defining there-between guides that encircle the upright,

a rocker configured to act on flanges or blocks distributed along the upright in such a way that the rocker being mounted on a transversal axis against the action of a spring that permanently acts on the rocker, a handle which is joined to the transversal axis for rotating the transversal axis to change the position of the rocker in relation to the upright, and a safety positioner, wherein the handle defines three operating positions for the rocker and the safety positioner also limits the positions of the rocker in three operating positions, as claimed in claims 1 and 10.

The closest prior arts of record, Waldschmitt et al (US 2003/0052249), Schworer (US 5,000,287), and Blaive et al. (EP 0155217) fail to teach three operating positions for the rocker and a safety positioner which limits the positions of the rocker in the three operating positions, as claimed in claims 1 and 10, and further fail to teach the safety positioner comprises an inner disc that moves with a tilting movement of the rocker and the inner disc has a peripheral notch that defines a groove, which works with a spring positioner which is housed, depending on the operating position of the rocker in one of three holes provided in an outer cover of the head in such a way that the tilting movement of the rocker is limited when the spring positioner abuts against one of the edges of the groove in the inner disc, as claimed in claim 1. Therefore, the claims 1-2, 7, and 10-12 deemed allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
